ABSTRACT:

PROBLEM TO BE SOLVED: To prevent unauthorized use of contents when using distributed contents in a terminal.

SOLUTION: The content reproduction terminal is composed as follows. A communication means carries out send and receive of data via a communication network between a license server issuing a license purchased by a user, and a content distribution server distributing contents. A license management means safely stores the license acquired from the license server against physical and electrical attack. A content reproducing means deciphers enciphered contents by using a content key included in the license acquired from the license server, detects electronic watermark data inserted in the contents distributed from the content distribution server, and carries out reproduction propriety determination of the contents by comparing information included in the license with the electronic watermark data.
